

CELL DEFENSE

Antioxidant Blend

Ingredients: Clove oil, Black Pepper oil, German Chamomile oil, Marjoram oil, Nutmeg oil

Aromatic 

Dilute 

Topical 

Internal 

CaCo-2 is a vetted mechanism for studying the bioavailability of specific constituents across the intestinal track. It is often used to measure the absorbability of nutrients in different environments. For example, a CaCo-2 analysis was used to learn that Iron’s absorbability is enhanced by the presence of vitamin C.

As a pioneer in essential oil research and development, and using a CaCo-2 assay, Améo has quantifiably measured the synergistic bioavailability of each of our single essential oils. From this assay, we discovered a myriad of oils that are rich in constituents that facilitate the bioavailability—and in turn the effectiveness—of other essential oil constituents. Améo has named these facilitating constituents “SuperCarriers.”

BENEFITS

Antioxidants are an important way to protect cells, the most basic unit of life, from damaging free radicals. To maximize the antioxidant benefits of essential oils, it is imperative that they can be absorbed intestinally. Améo’s Cell Defense blend combines antioxidant-rich, bioavailable SuperCarriers to help nourish and safeguard human cells.

SUGGESTED USES

- Add 3 drops of Cell Defense to an Améo Veggie Cap and take by mouth each morning
- Diffuse Cell Defense in an Améo diffuser to help protect your body from free radical damage
